

S. No.	Question	Blooms Taxonomy Level	Course Outcome
UNIT - I			
GROUP - A (SHORT ANSWER QUESTIONS)			
1.	Explain goals for testing and model for testing in software testing?	Understand	1
2.	Describe phases in tester's mental life and state Complexity Barrier?	Knowledge	1
3.	Explain about test design and explain different types of testing?	Understand	1
4.	Explain the following a) Environment b) Program c) Bugs	Apply	1
5.	State pesticide paradox and complexity barrier in purpose of testing?	Knowledge	2
6.	Demonstrate nightmare list and when to stop testing in the consequences of bugs?	Knowledge	2
7.	Illustrate hardware architecture and software architecture?	Understand	2
8.	Differentiate function versus structure testing .and compare small versus large programming?	Understand	2
9.	Demonstrate test bug remedies and illustrate requirement bugs?	Understand	2
10.	Explain external interfaces and internal interfaces and discuss the consequences of bugs?	Understand	2
11.	Define path testing and explain about decision and case statements?	Knowledge	5
12.	Explain bug assumption and compare control flow graphs and flow charts?	Understand	5
13.	State control flow graph and list independence and co-relation of variables and predicates?	Knowledge	5

14.	State process blocks and defines predicate and path predicates?	Knowledge	5
15.	Demonstrate path statement, path testing criteria and explain branch testing?	Understand	5
16.	Explain about simple independent and co-related predicates?	Knowledge	5
17.	Define loops and explain different types of loops and Explain nested loops	Understand	5
18.	Explain flow graph notational evolution and explain co-related independent predicates?	Understand	5
19.	Explain path nodes and links and explain the effectiveness and limitations of path testing?	Understand	5
20.	Explain multi entry and multi exit routines and describe path predicate expression?	Understand	5
GROUP-B (LONG ANSWER QUESTIONS)			
1	a. Discuss that software testing will ensure the quality of a developed software? b. Demonstrate the trade - off between quality assurance costs and manufacturing costs?	Apply	1
2	a. Describe is it possible for a tester to find all the bugs in a system? Why might it not be necessary for a program to be completely free of defects before it is delivered to its customers? b. Discuss to what extent can testing be used to validate that the program is fit for its purpose?	Understand	1
3	a. Demonstrate the phases in a tester's mental life? b. Describe that testing is not everything?	Apply	1
4	a. Explain the principles of test case design? b. List out various dichotomies and explain?	Understand	2
5	a. State differences between functional and structural testing? b. List the factors on which the importance of the bugs depend and give the metrics for them? c. Explain various consequences of bugs? d. Discuss the remedies for test bugs?	Knowledge	2
6	a. Classify the different kinds of bugs and explain? b. Explain the procedure used in quantifying the nightmare list to stop testing? c. Explain the five types of structural bugs?	Understand	4
7	a. Discuss clearly about requirements, features, and functionality of bugs? b. Discuss control and sequence bugs and the methods to be caught?	Understand	4
8	a. Summarize white box testing and black box testing and give the differences between them? b. Compare static data and dynamic data?	Understand	4
9	a. Discuss interface, integration and system bugs with an example? b. Explain about resource management problem in software testing? c. Define testing and list out the remedies for test design bugs?	Understand	4
10	a. Demonstrate structural bugs, coding bugs, data bugs and system bugs and discuss methods to catch these bugs? b. Discuss the classes of bugs in the taxonomy of bugs?	Apply	4
11	a. Define software bug in software testing? b. Discuss pesticide paradox and complexity barrier? c. Explain model for testing?	Knowledge	4
12	a. Define integration testing and discuss the goals of integration testing? b. Explain clearly the white box tests and behavioral tests?	Knowledge	4
13	a. Define statement coverage (C1) and branch coverage (C2)? Explain with an example methods to select enough paths to achieve C1+C2? b. Define loop? State and explain various kinds of loops with suitable examples also discuss methods to select optimal paths for C1+C2. (Statement coverage + Branch coverage)?	Knowledge	5
14	a. Discuss about assignment blindness, and equality blindness of predicates? b. Explain the terms achievable and unachievable paths?	Understand	5

15	a. Discuss about “Traversal marker” form of path instrumentation? b. Explain coincidental correctness? Give an example?	Understand	5
16	a. Discuss statement testing and branch testing? Give suitable examples? b. State and explain various path selection rules for path testing?	Understand	5
17	a. Explain about program’s control flow? Is it useful for path testing? b. Discuss various flow graph elements with their notations?	Understand	5
18	a. Justify flowchart is different from a control flow graph? b. Explain about multi entry and multi exit routines and fundamental path selection criteria?	Understand	5
19	Describe the following concepts a. Predicates b. Predicate Expression c. Predicate Coverage d. Achievable paths	Understand	5
20	a. Define path sensitization and write heuristic the procedure used in path sensitization? b. Explain how concatenated loops can be tested? c. Discuss the three cases for single loop testing?	Knowledge	5
GROUP-C (ANALYTICAL QUESTIONS)			
1	Discuss in practice, that life cycle model may have more, fewer or different levels of development and testing, depending on the project and the software product?	Understand	3
2	Demonstrate when the build comes to the QA team, the parameters to be taken for consideration to reject the build upfront without committing for testing?	Apply	2
3	Discuss that test cannot be automated? Acceptance test plan is prepared from? Explain the test case design methodology? Does test plan contain bug tracing procedure and reporting procedure?	Understand	4
4	Discuss the importance of a document for product? How will you test requirement and design document?	Understand	3
5	Identify yourself as a developer of flight control system? Describe any three test adequacy criteria you would consider applying to develop test cases for flight control system?	Understand	1
6	List and explain types of system test? Why is testing plan important for developing a repeatable and managed testing process? Give example.	Knowledge	1
7	Define role do user/client play in the development of test plan for a project? Should they be present at any of the test plan reviews? Justify.	Knowledge	2
8	Discuss developing a patient record system for health care centre, why one of the stop test will be most appropriate for this system? What is the role of the tester in supporting, monitoring and controlling of testing?	Understand	2
9	Demonstrate why is it important to meticulously inspect test result? Give Example? Discuss the drawbacks in case if you fail to inspect?	Apply	1
10	Enumerate why is it impossible for a tester to find all the bugs in a system? Why might it not be necessary for a program to be completely free of defects before it is delivered to its customers?	Knowledge	2
11	Consider the following fragment of code. Explain how many tests are required for 100% decision coverage? if width > length then biggest_dimension = width if height > width then biggest_dimension = height end_if end_if else biggest_dimension = length if height > length then biggest_dimension = height end_if end_if	Understand	5

12	<p>Design test cases to provide 100% statement and 100% decision coverage for the following fragment of code. if width > length then biggest_dimension = width else biggest_dimension = length end_if The following has been added to the bottom of the code fragment above. print "Biggest dimension is " & biggest_dimension print "Width: " & width print "Length: " & length. How many more test cases are required?</p>	Create	5
13	<p>Given the following code, Demonstrate which statement is true about the minimum number of test cases required for full statement and branch coverage?</p> <pre> Read p Read q IF p+q > 100 THEN Print "Large" ENDIF IF p > 50 THEN Print "p Large" ENDIF </pre>	Apply	5
14	<p>Describe the activities or tasks and responsibilities for developer or tester in support of multilevel testing?</p>	Understand	5
15	<p>List the tasks that must be performed by the developer or tester during the preparation for unit testing?</p>	Knowledge	5
16	<p>Illustrate the importance of security testing and what are the consequences of security breaches, also write the various areas which has to be focused on during security testing and State the need for integration testing in procedural code?</p>	Apply	5
17	<p>For the code fragment given below, Demonstrate which answer correctly represents minimum tests required for statement and branch coverage respectively</p> <pre> Discount rate=1; Fare = 1000; If ((person == "senior citizen") and ("travel month = January")) Bonuspoints = 100+Bonuspoints; If (class=="first") discountRate = .5; Fare = fare * discountRate; </pre>	Apply	5
18	<p>Consider pseudo code below were a programming language Find the no of tests are required to achieve 100% statement coverage?</p> <pre> If x=3 then Display_messageX; If y=2 then Display_messageY; Else Display_messageZ; </pre>	Apply	5
19	<p>Given the following code, Discuss the minimum number of test cases required for full statement and branch coverage?</p> <pre> Read p Read q IF p+q > 100 THEN Print "Large" ENDIF IF p > 50 THEN Print "p Large" ENDIF </pre>	Understand	5

20	<p>Define which combination of p, q and r values will ensure 100 % statement coverage?</p> <pre> if (p = q) { r = r + 1; if (r < 5) { s = 10; } } else if (p > q) { s = 5; } </pre>	Knowledge	5
21	<p>For the following piece of code Demonstrate how many test cases are needed to get 100% statement coverage?</p> <pre> Procedure X Read (Color) // Input color from user IF (Color == RED•) THEN Call Roses(Color) ELSEIF (Color == BLUE•) THEN Call Violets(Color) ELSE PRINT User is no Shakespeare SaveToDatabase(Color) End Procedure X </pre>	Apply	5
22	<p>For the following piece of code, Demonstrate how many test cases are needed to get 100% statement coverage?</p> <pre> Procedure X Read (Color) // Input color from user IF (Color == "Red") THEN Call Roses(Color) ELSEIF (Color == "Blue") THEN Call Violets(Color) ELSE PRINT "User is no Shakespeare" SaveToDatabase(Color) End Procedure X </pre>	Apply	5
23	<p>Consider the following flow chart diagram:</p> <pre> graph TD Start(()) --> ReadA[Read A,B] ReadA --> DecA{A >= 2} DecA -- TRUE --> PrintAB[Print A+B] DecA -- FALSE --> PrintABM[Print A-B] PrintABM --> DecB{B < 1} DecB -- TRUE --> PrintAB DecB -- FALSE --> PrintBA[Print B-A] PrintAB --> PrintEnd[Print 'End'] PrintBA --> PrintEnd style Start fill:none,stroke:none style PrintEnd fill:none,stroke:none </pre> <p>Demonstrate the minimum number of test cases required for 100% statement coverage and 100%decision coverage, respectively?</p>	Apply	5

24	<p>Consider the following sample of pseudo code:</p> <pre> Read A, B, C; If A > B then Print "Primary ratio is" & A / B; End If If A > C then Print "Secondary ration is" & A / C; End If. </pre> <p>Show which of the following test cases would achieve 100% statement coverage</p>	Apply	5
25	<p>Consider the following sample of pseudo code:</p> <pre> Input ExamScore If ExamScore <= 75 then Print "Candidate has failed" Else Print "Candidate has passed" If ExamScore >= 120 then Print "Candidate has achieved a distinction" EndIf EndIf. </pre> <p>Show the minimum number of test cases required to guarantee 100% decision coverage?</p>	Apply	5
26	<p>If the system requires 100% decision coverage at component testing for all modules. The following module has been tested with a single test case. The test case follows the path A, B, D, E, F, and G. Demonstrate What level of decision coverage has been achieved?</p>	Apply	5
27	<p>Discuss one of the test goals for the project is to have 100% decision coverage. The following three tests have been executed for the control flow graph shown below?</p> <p>Test A covers path: A, B, D, E, G. Test B covers path: A, B, D, E, F, G. Test C covers path: A, C, F, C, F, C, F, G.</p> <div style="text-align: center; margin: 10px 0;"> <pre> graph TD A[A] --> B[B] A --> C[C] B --> D[D] D --> E[E] D --> F[F] C --> F E --> G[G] F --> G F --> C </pre> </div>	Understand	5

UNIT – II

GROUP - A (SHORT ANSWER QUESTIONS)

1.	Define transaction flow graph and define transaction with an example?	Knowledge	6
2.	Illustrate all c-uses/some p-uses strategies and discuss all p-uses/some c-uses strategies?	Knowledge	6
3.	Explain births and mergers in a transaction flow testing?	Understand	6
4.	Demonstrate transaction flow structure and discuss transaction flow testing techniques?	Apply	6
5.	Demonstrate du-path and define all du-paths?	Understand	6
6.	Define path selection and illustrate path sensitization?	Knowledge	6
6.	Describe all predicate uses and all computational uses strategy?	Apply	6

8.	Explain transaction flow sensitization and discuss transaction instrumentation?	Understand	6
9.	Demonstrate data flow anomalies and explain components of data flow model?	Understand	6
10.	Define data flow testing and explain the application tools and effectiveness of data flow testing?	Understand	6
GROUP-B (LONG ANSWER QUESTIONS)			
1	a. Discuss that data flow testing is helpful in fulfilling the gaps in path testing? b. Explain about data flow graphs? c. Name and explain data flow testing strategies?	Understand	7
2	a. Demonstrate an anomaly can be detected. Explain different types of data flow anomalies and data flow anomaly state graphs? b. Write applications of data flow testing?	Apply	7
3	a. Demonstrate the transaction flows? Discuss their complications? b. Discuss about static and dynamic anomaly detection?	Apply	6
4	a. State and explain various transaction flow junctions and mergers? b. Explain the terms inspections, reviews and walkthroughs?	Knowledge	6
5	a. Discuss the following strategies of data flow testing with suitable examples: i. All-predicate-uses (APU) strategy ii. All-computational (ACU) strategy b. Compare the path flow and data-flow testing strategies?	Understand	7
6	a. Define program slice? Discuss about static and dynamic program slicing? b. Explain the terms Dicing, Data-flow and Debugging?	Knowledge	7
7	a. Explain data-flow model? Discuss various components of it? b. Demonstrate transaction flows occurrence, illustrate with help of examples. Implementation of a transaction flow is usually implicit in the design of the systems control structure and database explains? c. Discuss about sensitization and instrumentation based on transaction flows?	Understand	6
8	a. Explain the transaction flow testing with an example? b. Distinguish between control flow and transaction flow?	Understand	6
9	a. Define transaction flow structure? Discuss the reasons that the transaction flows are often structured? b. Discuss the advantages and disadvantages of path selection in transaction flow?	Knowledge	7
10	a. Define the terms i. Biosis ii. Mitosis iii. Absorption iv. Conjugation b. Demonstrate transaction flow, explain it for online information retrieval system with the help of an example?	Knowledge	6
11	a. Discuss the different data object states in data-flow graphs? b. List nine possible two-letter combinations of the object states of data anomalies. classify them as buggy, suspicious and ok?	Understand	7
12	a. Define du path and definition-clear path segment? b. Discuss All-du-Paths (ADUP) is the strongest data-flow testing strategy?	Knowledge	7
13	a. Explain the modeling rules in data flow model? b. Define the terms i. Definition clear path segment ii. Loop free path segment iii. Simple path segment	Understand	7

14	<p>a. Explain the procedure to construct a Data flow graph?</p> <p>b. Construct the Dataflow graph for the following problem.</p> <p>i. Given L, t, and d, solve for Z.</p> <p>ii. $\cos(C) = \cos(L) \sin(t)$</p> <p>iii. $\tan(M) = \cot(L) \cos(t)$</p> <p>iv. $\tan(Z+F) = -\sin(L) \tan(t)$</p> <p>v. $\tan(F) = \cos(M) \tan(M+d)$.</p>	Understand	7
----	---	------------	---

GROUP-C (ANALYTICAL QUESTIONS)

1	Consider the following techniques. Find the static and dynamic techniques Explain them?	Understand	7
2	Discuss during an early period of test execution, a defect is located, resolved and conformed as resolved re-testing ,but is seen again later during subsequent test execution .what type of testing can be conducted for a related aspect of configuration management that is most likely to have broken down?	Understand	6
3	If a Product risk analysis is performed during the planning stage of the test process. During the execution stage of the test process, the test manager directs the testers to classify each defect report by the known product risk it relates to other. once a week test manager runs a report that shows the percentage of defects related to each known product risk and to unknown risks. Discuss what is one possible use of such a report?	Understand	6
4	Demonstrate the two specification based techniques are most closely related to each other? Write some key characteristics of specification based techniques?	Apply	7
5	Discuss the most important difference between the metrics based approach and the expert –based approach to test estimation?	Understand	7

UNIT – III

GROUP - A (SHORT ANSWER QUESTIONS)

1.	Explain domain and explain different domain bugs?	Understand	8
2.	Explain domain closure and define domain dimensionality?	Understand	8
3.	Discuss liberalizing transformation and co-ordinate transformation?	Knowledge	8
4.	Explain about a) Interior Point b) Boundary Point c) Extreme Point d) on-point e) off-point	Understand	8
5.	Describe co-incidental correctness and discuss representative outcome?	Understand	8
6.	Demonstrate complete and systematic boundaries and describe non-linear boundaries?	Understand	8
7.	Explain simple domain boundaries and compound predicates?	Understand	8
8.	State functional homogeneity of bugs and define random testing?	Knowledge	8
9.	Illustrate linear vector space and illustrate one-dimensional domain bugs closed boundaries?	Apply	8
10.	Explain loop free software and explain interface range/domain compatibility testing?	Understand	8

GROUP-B (LONG ANSWER QUESTIONS)

1	<p>a. Demonstrate a nice domain? Give an example for nice two-dimensional domains?</p> <p>b. Discuss the following terms:</p> <p>i. Linear domain boundaries</p> <p>ii. Non linear domain boundaries</p> <p>iii. Complete domain boundaries</p> <p>iv. Incomplete domain boundaries</p> <p>c. Discuss in detail the nice domains and ugly domains with suitable examples?</p>	Apply	8
2	<p>a. Demonstrate meaning of domain testing? Discuss various applications of domain Testing?</p> <p>b. Explain with a neat diagram, the schematic representation of domain testing ?</p>	Apply	8

3	a. Explain clearly method for testing one dimensional domains b. Discuss about equality and inequality predicates. Also explain how they are treated in domain testing?	Understand	8
4	a. Explain the domain boundary bugs for two dimensional domains? b. Discuss about systematic boundaries? c. Discuss about random testing?	Understand	8
5	a. Discuss in detail the domains and interface testing? b. Classify what can go wrong with boundaries, then define a test strategy for each case in domain testing?	Understand	9
6	a. Discuss about Linear, Non orthogonal, and Tilted domain boundaries with suitable examples? b. Discuss about ugly domains with suitable examples? c. Discuss about variations, tools and effectiveness of domain testing ?	Understand	8
7	a. Define the following concepts. i. Domains ii. Domain closure iii. Domain dimensionality iv. Bug Assumptions for domain Testing b. Explain simple domain boundaries and compound predicates?	Knowledge	8
8	a. Define domains and paths? Explain domains and testability tips b. Explain that domain testing can be used in both functional and structural testing?	Knowledge	8
9	a. Discuss about specified and implemented domains? b. Discuss about domain closure and domain dimensionality? c. Explain different one dimensional domain bugs?	Understand	8
10	a. Describe short notes on i. Ambiguities and contradictions ii. Simplifying the topology iii. Rectifying boundary closures b. Define the terms i. Interior point ii. Exterior point iii. Boundary point iv. On point and Off point	Understand	8
11	a. Explain the terms i. Domains and range ii. Closure compatibility ii. Domain compatibility testing b. Explain the differences between linearizing transformations and Co-ordinate transformation?	Understand	8
12	a. Discuss that programmers and testers treat ugly domains? b. Explain the restrictions that are made on the domains?	Understand	8
13	a. Explain in detail about domains and testability b. Explain the following terms i. Domain Testing ii. Linear zing Transformation iii. Non-Linear zing Transformation iv. Canonical program form c. Define domain and explain domain model in detail?	Understand	8
GROUP-C (ANALYTICAL QUESTIONS)			
1	Consider a wholesaler sells printer cartridges. The minimum order quantity is 5. There is a 20% discount for orders of 100 or more printer cartridges. You have been asked to prepare test cases using various values for the number of printer cartridges ordered. Demonstrate which of the following groups contain three test inputs that would be generated using boundary value analysis?	Apply	8

2	Discuss that would like to know whether black box testing techniques like boundary value analysis and equivalence partitioning during which phases of testing are they used, if possible with examples ?	Understand	8
3	Demonstrate why is it necessary to develop test cases for both valid and invalid input condition?	Apply	8
4	Demonstrate why it is necessary to develop test cases for both valid and invalid input condition. how important is document for product? how will you test requirement and design Document?	Apply	8
5	Consider programmer A and programmer B are working on a group of interfacing modules. Programmer A tends to be a poor communicator and does not get along well with Programmer B. Due to this situation, Discuss what types of defects are likely to surface in these interfacing modules?	Understand	9
6	A program validates a numeric field as follows: values less than 10 are rejected, values between 10 and 21 are accepted, values greater than or equal to 22 are rejected. Define which of the following covers the most boundary values?	Knowledge	9
7	Discuss In a system designed to work out the tax to be paid: An employee has \$4000 of salary tax free. The next \$1500 is taxed at 10% The next \$28000 is taxed at 22%. Any further amount is taxed at 40% To the nearest \$ which of these is a valid boundary value analysis test case?	Understand	9
8	Demonstrate the digital "Rainbow Thermometer" uses 7 colors to show the ambient temperature. Each color spans a range of just 5 Deg. C, with an operating minimum and maximum of minus 5 Deg. C and 30 Deg.C. Which of the following values is least likely to have been identified when applying the boundary value test design technique?	Apply	9
9	Given the following sample of pseudo code? Roman"> Input number of male rabbits Input number of female rabbits If male rabbits > 0 and female rabbits > 0 then Input Do you want to breed (Yes / No) If breed = "No" Print "Keep male and female rabbits apart!" End if End If. Demonstrate which of the following test cases will ensure that statement "06" is executed?	Apply	9
10	Consider Arrive and Go airline wants to clarify its baggage handling policy, whilst maximizing revenues, and will introduce the following tariffs for all baggage per individual customer (weights are rounded up to the nearest 0.1Kg): The first 2Kg will be carried free of charge. The next 10 Kg will be carried for a flat charge of \$10. An additional 15Kg will be charged a total charge of \$17. Luggage over this amount will be charged at \$5 per Kg, up to a maximum of 150Kg per person. No passenger may take more than 150Kg with them. Define Which of the following would constitute boundary values for baggage weights in the price calculation?	Knowledge	9
11	For a system designed to work out the tax to be paid. An employee has \$4000 of salary tax free. The next \$1500 is taxed at 10%. The next \$28000 is taxed at 22% .Any further amount is taxed at 40% .To the nearest \$.Discuss which of these is a valid boundary value analysis test case?	Understand	9
12	If the order numbers on a stock control system can range between 10000 and 99999 inclusive. Demonstrate the following inputs might be a result of designing tests for only valid equivalence classes and valid boundaries?	Apply	9

UNIT – IV

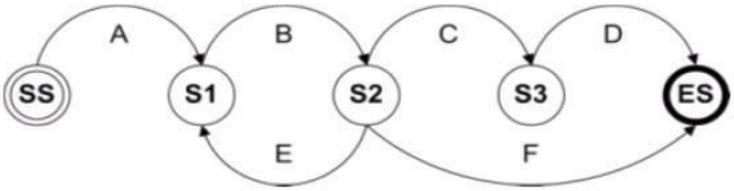

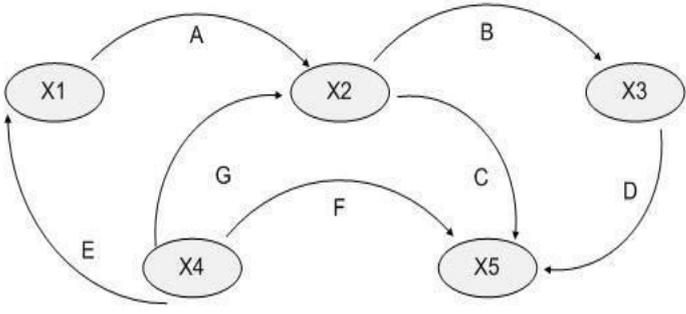

GROUP - A (SHORT ANSWER QUESTIONS)

1.	Define path expression and path product and discuss distributive law?	Knowledge	1
2.	Explain path sum and discuss approximate minimum number of paths?	Understand	1
3.	Explain the methods of regular expressions and flow anomaly detection?	Understand	1
4.	Demonstrate absorption law and explain the limitations of path testing?	Apply	1

5.	Define loops and explain different loop terms?	Knowledge	1
6.	Explain identity elements and explain mean processing time of a routine?	Understand	1
7.	Discuss about cross-term step and explain maximum path count arithmetic?	Understand	1
8.	Explain parallel terms and demonstrate how many paths in a flow graph?	Understand	1
9.	Discuss loop terms and demonstrate lower path count arithmetic?	Understand	1
10.	Explain applications of path testing and explain push/pop and get/return?	Understand	1
11.	Define hardware logic testing and explain KV-charts?	Knowledge	1
12.	Explain about knowledge based systems in logic based testing?	Understand	1
13.	Define decision table and explain about don't care and impossible terms?	Knowledge	12
14.	Compare condition stub and action stub and discuss three successive stages of canonical processors?	Understand	12
15.	Explain decision table processors and discuss finding and translating the logic?	Understand	12
16.	Explain test case design and sketch KV-charts of 3 variables and 4 variables?	Understand	12
17.	Discuss predicates and relational operators in logic based testing?	Understand	12
18.	Define case tables and multi valued logics in knowledge based systems?	Knowledge	12
19.	Demonstrate the rules of Boolean algebra and explain them in detail?	Apply	12
20.	Define the operators of boolean algebra and list them with examples?	Knowledge	12
GROUP-B (LONG ANSWER QUESTIONS)			
1	a. Define structured code and explain lower path count arithmetic? b. Discuss the looping probability of a path expression? Write arithmetic rules and explain with an example?	Knowledge	1 0
2	a. Demonstrate the steps involved in node reduction procedure. Illustrate all the steps with help of neat labeled diagrams? b. Demonstrate using reduction procedure to convert flow graph whose links are labeled into a path expression. Explain each step with flow graph?	Apply	1 1
3	a. Explain about maximum path count arithmetic with an example. b. In reduction procedure explain about: i. Cross-Term step ii. Parallel Term iii. Loop Term iv. Comments, Identities and Node - Removal Order	Understand	1 0
4	a. Define path product, path expression and path sum? Explain with an example? b. Explain applications of paths, path products and regular expressions?	Knowledge	1 0
5	a. State Huang's Theorem and explain its implementation? Explain its generalizations and limitations? b. Write short notes on: i. Distributive laws ii. Absorption Rule iii. Loops iv. Identity Elements	Knowledge	1 1
6	a. Demonstrate how to find approximate minimum numbers of paths with an example? b. Explain the probability of getting path expression with an example?	Apply	1 0
7	a. Discuss regular expressions and flow anomaly detection? b. Explain a regular expression and flow anomaly detection method with an example and limitations?	Understand	1 1
8	a. Explain about the mean processing time of a routine with an example? b. Explain the generalizations and limitations of regular expressions?	Understand	1 1
9	a. Explain the push/pop arithmetic with an example? b. Explain the get/return arithmetic with an example?	Understand	1 1
10	a. Explain the problem occurred in the regular expressions with an example? b. Explain the method that will be useful for regular expressions with an example?	Understand	1 1

11	a. Demonstrate decision table and how is a decision table useful in testing? Explain with the help of an example? b. Explain prime implicate, sum-of-product form and product-of-sum form?	Apply	1 2
12	a. Explain about the don't care conditions in the logic based testing? b. Discuss about the ambiguities and contradictions in the specifications?	Understand	1 2
13	a. Describe the procedure for specification validation using KV charts? b. Demonstrate methods to check the consistency and completeness in the decision tables?	Understand	1 3
14	a. Discuss that can we form the specifications into the sentences and write down the different phrases which can be used for the words? b. Explain the following in logic based systems i. Path and domain ii. Test case design iii. Boolean equations	Understand	1 2
15	a. Demonstrate to minimize the function using karnaugh map method: $F(A,B,C,D) = P(1,2,3,8,9,10,11,14) + Pd(7,15)$ b. Demonstrate by means of truth tables the validity of the following theorems of Boolean algebra: i. Associative laws ii. Demorgans theorems for three variables iii. Distributive law of + over	Apply	1 3
16	a. Demonstrate Boolean algebra rules. Illustrate the rules with path expressions. b. Use a Karnaugh map to minimize $F = B'C'D' + A'B'C'D' + ABC'D + A'BCD + ABD + B'CD' + A'BC'D$	Apply	1 3
17	a. Demonstrate reduction the following functions using karnaugh map method $F(A,B,C,D) = \pi(4,5,6,7,8,12,13) + d(1,15)$	Apply	1 3
18	a. Discuss the different operators used in Boolean algebra and give tracts tables for them? b. Explain the testing strategies for KV charts?	Understand	1 3
19	a. State the representation of minterm and maxterm for three variables(D+M) b. Minimize the given expression using four variable k-map. $F(A,B,C,D) = _ m(0,1,3,4,7,8,15)$.	Knowledge	1 3
20	a. Explain the terms i. Hardware logic testing ii. Specification systems and languages iii. Knowledge based systems b. Explain the terms i. Decision table processors ii. Expansion of immaterial cases iii. Test case design	Understand	1 2
21	a. Explain KV charts for two variables and three variables b. Define the terms predicate, relational operator of case statements and multi valued logics?	Understand	1 3
GROUP-C (ANALYTICAL QUESTIONS)			

1	<p>Evaluate the mean processing time of a program represented by the following flow graph numbers in the brackets are the probabilities and the other numbers are processing times?</p>	Evaluate	1 0																																			
2	<p>Describe the minimum combination of paths required to provide full statement coverage?</p>	Understand	1 0																																			
3	<p>Given the following highly simplified procedure Ask: "What type of ticket do you require, single or return?" IF the customer wants return Ask: "What rate, Standard or Cheap-day?" IF the customer replies Cheap-day Say: "That will be 11:20" ELSE Say: "That will be 19:50" ENDIF ELSE Say: "That will be 9:75" ENDIF Calculate the minimum number of tests that are needed to ensure that all the questions have been asked, all combinations have occurred and all replies given.</p>	Understand	1 1																																			
4	<p>Explain the relations between regular expressions and flow anomaly detection with an example. If X and Y are following path expressions, answer the given questions. X = abc + def + ghi Y = uvw + z i) Find value of XY ii) Is XY = YX. Justify your answer.</p>	Understand	1 1																																			
6	<p>Given the following decision table:</p> <table border="1" style="margin: 10px auto; border-collapse: collapse; text-align: center;"> <thead> <tr> <th></th> <th>Rule 1</th> <th>Rule 1</th> <th>Rule 1</th> <th>Rule 1</th> </tr> </thead> <tbody> <tr> <td style="color: red;">Conditions</td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>Frequent Flyer</td> <td>Gold</td> <td>Gold</td> <td>Silver</td> <td>Silver</td> </tr> <tr> <td>Class</td> <td>Business</td> <td>Economy</td> <td>Business</td> <td>Economy</td> </tr> <tr> <td style="color: red;">Actions</td> <td></td> <td></td> <td></td> <td></td> </tr> <tr> <td>Free Upgrade</td> <td>First</td> <td>Business</td> <td>No</td> <td>Business</td> </tr> <tr> <td>Discounted Upgrade</td> <td>N/A</td> <td>First</td> <td>First</td> <td>None</td> </tr> </tbody> </table> <p>Describe what is the expected result for each of the following test cases?</p>		Rule 1	Rule 1	Rule 1	Rule 1	Conditions					Frequent Flyer	Gold	Gold	Silver	Silver	Class	Business	Economy	Business	Economy	Actions					Free Upgrade	First	Business	No	Business	Discounted Upgrade	N/A	First	First	None	Understand	1 2
	Rule 1	Rule 1	Rule 1	Rule 1																																		
Conditions																																						
Frequent Flyer	Gold	Gold	Silver	Silver																																		
Class	Business	Economy	Business	Economy																																		
Actions																																						
Free Upgrade	First	Business	No	Business																																		
Discounted Upgrade	N/A	First	First	None																																		

7	<p>Given the following state transition diagram:</p>  <p>Demonstrate which of the test cases below will cover the following series of state transitions? SS - S1 - S2 - S1 - S2 - ES</p>	Apply	1 3
8	<p>Define how many test cases are required to cover 100% 0-switch coverage respectively from X2?</p> 	Knowledge	1 3
10	<p>Illustrate the following functions using K-Maps $F(A,B,C,D) = P(4,5,6,7,8,12,13)+d(1,15)$</p>	Apply	1 3
11	<p>Explain how can we form specifications into sentences? Write down different phrases that can be used for words?</p>	Understand	1 3
12	<p>Demonstrate by means of truth tables the validity of the following theorems of Boolean algebra</p> <ol style="list-style-type: none"> i. Associative Laws ii. Demorgan's theorems for three variables iii. Distributive Law iv. Absorption Rule 	Apply	1 3
13	<p>Discuss an example of decision table testing for a financial application applied at the system level?</p>	Understand	1 3

UNIT-V

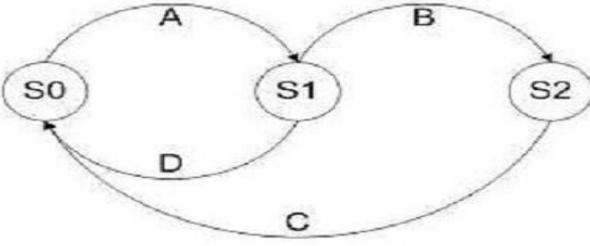

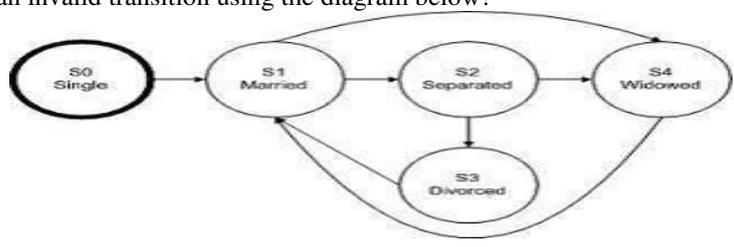

GROUP - A (SHORT ANSWER QUESTIONS)

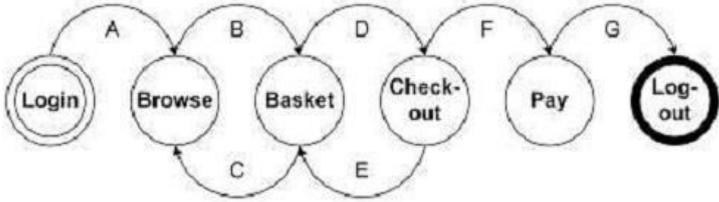

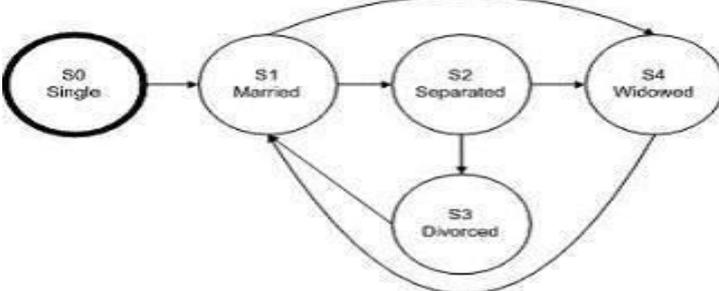

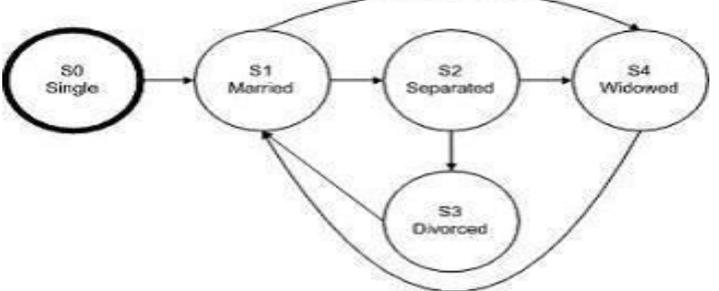

1.	Define finite state machine and define number of states and impossible states?	Knowledge	14
2.	Explain state graphs and explain about equivalent states?	Understand	14
3.	Define transition and discuss unreachable states?	Knowledge	14
4.	Explain about state tables and define dead states?	Understand	14
5.	Compare time and sequence and explain about state bugs?	Understand	14
6.	Explain input encoding and input alphabet and illustrate output errors?	Understand	14
7.	Discuss output encoding and output alphabet and explain encoding bugs?	Understand	14
8.	Demonstrate state codes and state symbol products and explain limitations of state graphs?	Apply	14
9.	Explain the application comments for designers and testers?	Understand	14
10.	Explain switches, flags and unachievable paths and demonstrate unspecified and contradictory transitions?	Understand	14
11.	Define graph matrix and explain out-degree and in-degree?	Knowledge	15
12.	Explain connection matrix and explain about relations?	Understand	15
13.	Explain properties of relations and define parallel reduction?	Understand	15
14.	Define equivalence relation and explain loop reduction?	Knowledge	15
15.	Explain partial ordering relations and demonstrate cross-term reduction?	Understand	15
16.	Explain the powers of a matrix and define node reduction optimization?	Understand	16
17.	Discuss matrix power and products and illustrate linked list representation of graph matrices?	Understand	16

18.	Demonstrate set of all paths and define loops?	Apply	16
19.	Explain partitioning algorithm of graph matrices?	Understand	16
20.	Discuss node reduction algorithm of graph matrices?	Understand	16
GROUP-B (LONG ANSWER QUESTIONS)			
1	Discuss short notes on i. Transition bugs ii. Dead states iii. State bugs iv. Encoding bugs	Understand	1 4
2	a. Differentiate between good state graphs and bad state graphs? b. Discuss the principles of state testing? Explain its advantages and disadvantages?	Understand	1 4
3	a. Compare the differences between logic based testing, state testing and path testing? b. Explain all the rules in the conversion of specification into a state graph?	Understand	1 4
4	a. Explain the terms i. No of states ii. Impossible states iii. Equivalent States b. Describe the types of bugs that can cause state graphs?	Understand	1 4
5	a. Demonstrate the software implementation issues in state testing? b. Discuss tester's comments about state graphs?	Apply	1 4
6	a. Explain state testing and testability tips with an example? b. Explain state graphs with implementation with an example?	Understand	1 4
7	a. Define the following terms i. States ii. Inputs and transitions iv. Outputs iv. State tables b. Define the terms i. Unreachable states ii. Unspecified and contradictory transitions	Knowledge	1 4
8	a. Illustrate designer's comments about state graphs? b. Draw a hard disk recovery a state graph with a state table?	Apply	1 4
9	Explain and write a short notes on i. Switches, Flags, unachievable paths. ii. Essential an Inessential finite state behavior	Understand	1 4
10	Demonstrate design guidelines for building finite state machines into your code?	Understand	1 4
11	a. Demonstrate an algorithm for node reduction (general)? b. Illustrate the applications of node reduction algorithm?	Apply	1 5
12	a. Discuss a node reduction algorithm in terms of matrix operations? b. Define graph matrices and their applications?	Understand	1 5
13	a. Illustrate a partitioning algorithm with an example? b. Discuss strategy to write an algorithm for all pair's paths using matrix operations?	Apply	1 6
14	a. Describe about equivalence relation and partial ordering relation? b. Discuss relative merits and demerits of different graph matrix representations?	Understand	1 6
15	a. Demonstrate the operations does a toolkit consist for the representation of graphs? b. Illustrate about matrix powers and products?	Apply	1 6
16	a. Demonstrate the advantages of array representations? b. Define relations and give their properties? c. Describe loops and demonstrate loops in matrix representation?	Apply	1 6
17	a. Discuss the linked list representation? b. Demonstrate the matrix operations in tool building?	Understand	1 6

18	a. Define graph matrices and evaluate graph matrix with pictorial graph explain the basic algorithms? b. Demonstrate maximum element and minimum element of a graph?	Knowledge	1 5
19	a. Define a relation? Explain relation matrix with examples? b. Explain the properties of relations? Explain them with example?	Knowledge	1 6
20	a. Explain parallel reduction and loop reduction? b. Write about equivalence relation and partial ordering relation?	Understand	1 6

GROUP-C (ANALYTICAL QUESTIONS)

1	<p>Explain the given following state transition table which of the test cases below will cover the following series of state transitions? S1 SO S1 S2 SO</p> 	Understand	1 4																																			
2	Consider Postal rates for 'light letters' are 25p up to 10g, 35p up to 50g plus an extra 10p for each additional 25g up to 100g. Discuss which test inputs (in grams) would be selected using equivalence partitioning	Understand	1 4																																			
3	If thermometer measures temperature in whole degrees only. If the temperature falls below 18 degrees, the heating is switched off. It is switched on again when the temperature reaches 21 degrees. Show the best values in degrees to cover all equivalence partitions?	Apply	1 4																																			
4	Evaluate a system designed to work out the tax to be paid: An employee has 4000 of salary tax free. The next 1500 is taxed at 10%.The next 28000 after that is taxed at 22%.Any further amount is taxed at 40%.To the nearest whole pound, Discuss which of these groups of numbers fall into three different equivalence classes?	Evaluate	1 4																																			
5	<p>Consider there is one application, which runs on a single terminal. There is another application that works on multiple terminals. Demonstrate what are the test techniques you will use on the second application that you would not do on the first application? Which test suite will check for an invalid transition using the diagram below?</p> 	Apply	1 4																																			
6	<p>Consider the following state table:</p> <table border="1" style="width: 100%; text-align: center;"> <thead> <tr> <th></th> <th>On</th> <th>Off</th> <th>Channel 1</th> <th>Channel 2</th> <th>Channel >2</th> <th>Stby</th> </tr> </thead> <tbody> <tr> <th>Standby</th> <td>Live</td> <td>N</td> <td>N</td> <td>N</td> <td>N</td> <td>N</td> </tr> <tr> <th>Live</th> <td>N</td> <td>Standby</td> <td>Display Channel 1</td> <td>Display Channel 2</td> <td>N</td> <td>Standby</td> </tr> <tr> <th>Display Channel 1</th> <td>N</td> <td>N</td> <td>N</td> <td>Display Channel 2</td> <td>Live</td> <td>Standby</td> </tr> <tr> <th>Display Channel 2</th> <td>N</td> <td>N</td> <td>Display Channel 1</td> <td>N</td> <td>Live</td> <td>Standby</td> </tr> </tbody> </table> <p>Demonstrate which of the following represents an invalid transition (N)?</p>		On	Off	Channel 1	Channel 2	Channel >2	Stby	Standby	Live	N	N	N	N	N	Live	N	Standby	Display Channel 1	Display Channel 2	N	Standby	Display Channel 1	N	N	N	Display Channel 2	Live	Standby	Display Channel 2	N	N	Display Channel 1	N	Live	Standby	Apply	1 4
	On	Off	Channel 1	Channel 2	Channel >2	Stby																																
Standby	Live	N	N	N	N	N																																
Live	N	Standby	Display Channel 1	Display Channel 2	N	Standby																																
Display Channel 1	N	N	N	Display Channel 2	Live	Standby																																
Display Channel 2	N	N	Display Channel 1	N	Live	Standby																																

7	<p>Consider the following state transition diagram .Show which of the following series of state transitions contains an invalid transition which may indicate a fault in the system design?</p> 	Apply	1 4
8	<p>Without testing all possible transitions, Demonstrate which test suite will test all marital statuses?</p> 	Apply	1 4
9	<p>Using the diagram below, Explain which test suite will check for all valid state transitions using the least effort?</p> 	Understand	1 4
10	<p>Consider Four testers each submitted an incident report in which each reported a problem with the user log-on process. User log-on is a critical component of the system. The table below describes the four defect reports submitted?</p>	Apply	1 4
11	<p>Explain win runner testing process?</p>	Understand	1
12	<p>Discuss how does win runner recognize objects on the application?</p>	Understand	1
13	<p>Illustrate the advanced scripting techniques for test execution tools?</p>	Apply	1
14	<p>Discuss the potential benefits from using tools in general to support</p>	Understand	1
15	<p>Explain the goal for a proof-of-concept or pilot phase for tool evaluation?</p>	Understand	1
